REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the present invention is directed to an aluminum alloy product, with a specific composition and improved properties. The present invention achieves a recrystallized product by the absence of Zr. The closest prior art is Karabin et al (US 5,863,359). Karabin et al teach an aluminum alloy that has a similar composition to that of the present invention, except that Karabin et al include an amount of Zr in the alloy to prevent recrystallization. Karabin et al also teach that in order to achieve the improved properties, it is critical that the alloy be unrecrystallized. The present invention achieves mechanical properties equivalent to, or slightly improved on, the mechanical properties of Karabin et al. The recrystallized product of the present invention achieves unexpected results in the mechanical properties. Heretofore, it had been considered by one of ordinary skill in the art that a recrystallized product did not have improved properties, especially in toughness and fatigue properties. Therefore, it would not have been obvious to one of ordinary skill in the art to modify the teachings of Karabin et al to achieve the present invention.

The terminal disclaimer filed on 7 February 2002 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6,444,058 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
